

# Roger Steene's Oceanic Wilderness

Take a fascinating journey along with the camera, from helicopter to deep reef, from drifting in mid ocean to tropical island and lagoon, from microscope to tide pool, from kelp to coral, from cold water to warm, from day to night, and witness the remarkable secrets and life forms of this last earthly frontier. Feel privileged, as a number of subjects are featured here for the first time and have never been recorded.

The exquisite beauty of form, colour, and motion of marine life is profusely illustrated in this outstanding book of 625 colour plates in 340 pages. Five years in preparation, **Oceanic Wilderness** visits geographic extremities from the Caribbean to the East Pacific, Japan to the South and West Pacific, temperate and tropical Australia to Southeast Asia, through the Indian Ocean to the Red Sea and places in between.

Roger Steene describes the wonderful diversity of Earth's little known undersea world. The images in this book cover vertebrates, invertebrates, crustaceans and molluscs, through numerous themes from colour to habitat.

Roger is unique. He would be the worlds greatest underwater photographer specialising in close-up photography of very small creatures. It is a wonder he can find these things let alone photograph them. If you browse through the plates you will see that many of his subjects are measured in a few millimetres yet fill a whole page.
